# **MALAYSIAN RESPONSIBILITY TOWARDS PREVENTIVE MEASURES DURING COVID-19 PANDEMIC**

Nadia Amirudin, Albeny Joslyn Panting, Norbaidurah Ithnain, Rosnani Kassim, Saiful Adli Suhaimi, Khairul Amar Musa Institute for Health Behavioural Research, National Institutes for Health, Ministry of Health Malaysia

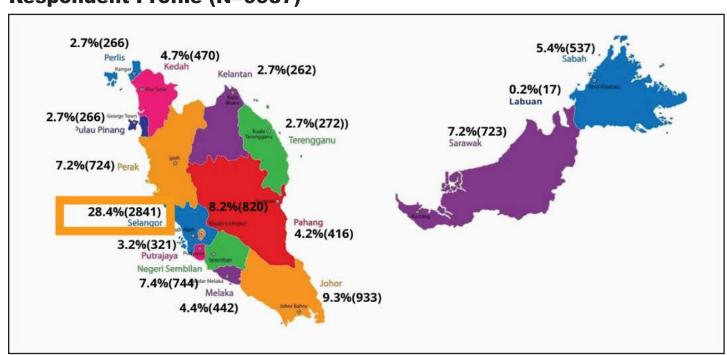

#### INTRODUCTION

Currently, there is no vaccine available to prevent COVID-19. Among the preventive measures that has been implemented at the moment is by taking responsibility in practicing social distancing and good hygiene. This study explores Malaysian responsibility towards preventive measures to avoid spreading of the virus.

#### **RESULTS**

## **Respondent Profile (N=9987)**

#### MATERIALS AND METHODS

## STUDY DESIGN

A Cross-Sectional Online Survey

### **POPULATION**

Malaysian, an internet user aged 18 years and above

#### **DATA COLLECTION**

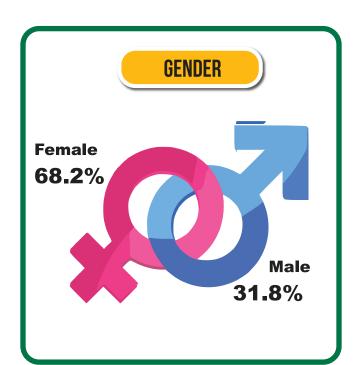

7th & 8th April 2020 (2nd phase of MCO)

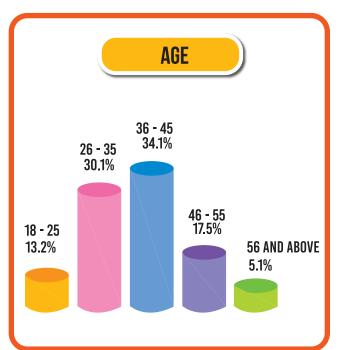

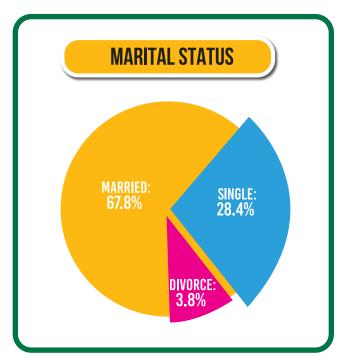

# TOTAL RESPONDENT

9,987

The questionnaire comprised questions on preventive measures including disinfecting house, washing hands regularly, wearing face mask and staying at home. For the purpose of tracing close contact, questions on travel history disclosure to healthcare provider and notifying the nearest clinic or hospital if any COVID-19 symptoms appear/show within family members were included in the study.

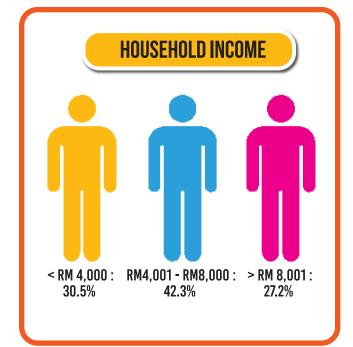

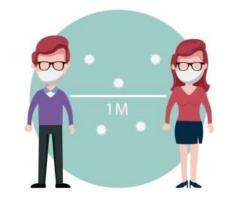

Table 1: Independent T-Test for Gender Differences with Preventive Measures during COVID-19

Variable	Mean (SD)		t value (df)	p value*
Gender	Male	Female		
Preventive Measures during COVID-19	33.43	33.50	-1.018(9895)	0.309*
during COVID-19	(3.406)	(3.425)		

\*p>0.05

Table 2: One Way ANOVA summary of Preventive Measures during COVID-19							
Variable	Df	Mean Square	F	Sig. (p)			
Age							
Between Groups	4	0.556	0.346	0.847*			
Within Groups	9892	11.691					
Household income							
Between Groups	2	5.481	0.469	0.626*			
Within Groups	9894	11.689					
Marital Status							
Between Groups	2	7.498	0.641	0.527*			
Within Groups	9894	11.688					
*p>0.05							

# **DISCUSSION / CONCLUSION**

- The highest percentage of respondents were from Selangor (28.4%), female (68.2%), married (67.8%), age 36-45 years old (34.1%) and household income between RM 4,001 - RM 8,000 (42.3%).
- This study found that there was no significant difference between preventive measures with gender, age group, marital status and household income (p>0.05).
- Regardless of difference in sociodemographic, all respondents felt responsible to take preventive measures as recommended by the authorities.
- Thus, continuous health promotion strategies are needed to facilitate and sustain the necessary behavioural changes in preventing the transmission of COVID-19.

# **ACKNOWLEDGMENT**

We would like to express our gratitude to the Director-General of Health and Deputy Director-General of Health (Research and Technical Support) Malaysia for allowing this presentation. We also would like to express appreciation for the support from all parties that have contributed directly or indirectly to complete this study.
